widvu.com

Results-driven Backend Developer with a strong focus on building high-performance systems and intuitive user interfaces. Experienced in designing RESTful APIs, modern frontend/backend frameworks, and database optimization to bridge the gap between robust infrastructure and seamless user experiences. Currently exploring serverless architectures and refining full-stack workflows to integrate clean code, scalable databases, and responsive interfaces efficiently.

Experience

2025 - PRESENT

Full Stack Developer/Grupo Sysven

Lead the complete application lifecycle, from interactive UI design to robust API architecture and database management. Translated complex technical requirements into efficient code, ensuring system scalability and maintaining organized, modular helper functions. Managed deployment and maintenance in mostly on-premise environments, requiring deep control over local infrastructure, server security, and hardware-level performance optimization

Key Projects

- Developed a bidirectional synchronization system for two PostgreSQL databases
- Designed a web-based inventory system for a prominent medical supply company
- Built a management reporting API integrated with an ERP system
- Developed a parking ticket management system for residential complexes

Open-Source Projects

Committed to the open-source ecosystem, creating modular and scalable tools

- **Venezuelan Cinema Gallery** (movies.widvu.com): An interactive gallery for national cinema. Features community-driven database growth with an admin moderation panel and private watchlists
- **Art Institute of Chicago Gallery** (art.widvu.com): Web app utilizing the Chicago Art Institute API. Implemented a dynamic refresh system and optimized multimedia delivery
- **Latitud58 E-commerce** (latitud58.net): Robust food truck ordering system. Integrated real-time order management, checkout flows with external delivery services, and automated transactional emails via Google API
- **GitHub Activity CLI** (GitHub): A TypeScript-based Command Line Interface tool to query recent user activity without using external API libraries
- **LabSystem** (GitHub): Laboratory management software built with C++ and SQLite, featuring stock control, patient records, and test tracking via an optimized console interface
- **BugEngineer** (https://github.com/Willi4amVargas/bugenginner): A 2D educational game developed in Godot (GDScript) designed to teach Python programming logic

Technical Skills

- Programming Languages:
  - Python
  - Javascript
  - Typescript
- Libraries/Frameworks
  - NodeJS
  - NextJS
  - React
  - FastAPI
  - Django
  - ExpressJS
  - NestJS
  - AngularJS
- Databases
  - Postgresql
  - MongoDB
- Tools and Devops
  - Docker
  - Linux
  - AWS (S3)
  - Github Actions
- Testing
  - Jest

Education

2023/07-PRESENT

Systems Engineering/Universidad Nacional Experimental de las Fuerzas Armadas (UNEFA)

Systems Engineering student at UNEFA, actively participating in technological initiatives and gaining hands-on experience in software development, with a focus on ERP system integration and external application design

2024/06-2025/04

Diploma in Computer Programming/Ingeniería Digital (Táchira - Venezuela)

Earned a Computer Programming Diploma from Ingeniería Digital, achieving advanced proficiency in Python and JavaScript. Developed practical expertise in React, PostgreSQL, and modern web tech stacks
